

Dear Sir
Re Objection to PDO

I am very disappointed that a decision affecting so much of Warrington was only released into the public domain as people were heading into the summer holidays and Parish Councils were in their summer recess. This has meant that my response is not as measured and researched as it should be over such an important matter.

My summary points are:

The current road network cannot cope and has been unable to cope from the south of Warrington for many years. the introduction of more properties and businesses to the numbers shown will only force people to look elsewhere and be counter productive to the 'success' Warrington at looking for. It is surrounded by water and motorways just sometimes expansion cannot happen.

The greenbelt is there to be an area that creates space between locations and is not necessarily obviously productive but that is a short sighted view and dangerous to the health and well being of the area, people and wildlife all of which is needed. Post brexit we need to be looking at other ways to be self sufficient as a country whils population requirements are already seeing a trend downwards.

Destroying wildlife habttat puts into jeopardy bees and natural polliniaation. Having visited an exhibition in France they explain that without them humans will last 4 yars beyond that point. Please don't let over development be the modern day plague of the 21st century.

Flooding ha\s seen a significant increase in the last 15 years as development has increased.

 the addition of more buildings, hard standings, roads with their water urn off will only further increase the risks.

The WHO show Warrington as having very poor air quality. This is with the green belt and open space and reserves that at in place. Take that away with nothing to mitigate the increase in traffic and pollution seems a very short sighted and poor approach to the people living here or y9u at wanting to be attracted here.

I have far more that is only partially researched and with further time I would have compiled a more complete response.

I whole heartedly object to the assumptions in the PDO and the time frame residents have had to respond. I object to not having a meeting in the Grappenhall/Thelwall area which would have highlighted to so many here what was happening.

Regards
