

Dear Sirs,

As a resident of Moore Village  I find it very hard to envisage what life will be like here if you go ahead with your proposals. We have at the moment some agricultural land on the edge of our village which supports our mental health as well as helping to feed us, at a time when we are being told we must plan for food security to take this land for any form of building is to ignore this future problem because once agricultural land has gone we can never get it back. We have always been led to believe that our green belt was in force to stop Warrington and Runcorn becoming a continuous built up area. If your plans were to come into fruition Moore would no longer exist as a village and the traffic you would be creating would become intolerable.

With regard to the traffic I fail to see how your new link road would make much difference because of all the new traffic that would be created by 2000 new homes that would on average mean 4000 more cars on the surrounding roads and as you well know if there is a problem on our local motorways (which is a regular occurrence) the whole of south Warrington comes to a standstill now. Also I understand that Warrington is the second worst town in the northwest for air pollution now and I dread to think what it will be like if your plans go ahead. This of course comes at a time when air pollution is making a lot of headlines regarding our health. You must also consider how much extra traffic will be coming through Warrington to avoid the tolls being charged on the new bridges in Halton.

With regard to Peel Holdings not only would their plans destroy the lives of people living on Promenade Park. The plan to destroy Moore Nature Reserve is nothing short of Corporate Vandalism on a grand scale. This reserve is used by adults and children from a large catchment and its loss would be inexcusable

Finally Moore is a happy caring community that would be completely destroyed by your local plan and we are not even able to express our feelings in the ballot box!

Yours faithfully
